

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant	: Kreutzer <i>et al.</i>	Art Unit	: 1635
Serial No.	: 10/612,179	Examiner	: Tracy Ann Vivemore
Filed	: July 2, 2003	Conf. No.	: 5239
Title	: METHOD AND MEDICAMENT FOR INHIBITING THE EXPRESSION OF A GIVEN GENE		

MAIL STOP AMENDMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Applicants request consideration of the references listed on the attached PTO-1449 form. These references were cited in an opposition proceeding filed against a counterpart European patent. References A2 through A52 are submitted herewith. References A53 through A63 are submitted with a separate transmittal letter.

Non-patent references A19, A21, and A34 are in German. As required under 37 CFR § 1.98(a)(3), a concise explanation of the relevance of these documents is provided below. The statements below are essentially the same characterizations provided by the parties in the proceedings. English language translations of the documents are not readily available but can be obtained should the Examiner request them.

Reference A19: Dellweg *et al.*, ed., Römpf Lexikon Biotechnologie, p. 354 and p. 673 (1992) (in German):

This reference was cited by the patentee to introduce a definition of the term "hairpin" as a "Single stranded DNA- or (in vivo more frequently) RNA-sequences, which fold back onto themselves forming a loop structure, and which are stabilised by intramolecular interactions".

This definition served to demonstrate that the double stranded RNA species exemplified in Example II of WO 00/44895 is not a hairpin as commonly understood despite the C18 linker, since it is not a continuous RNA strand. Hence, prior art demonstrating hairpins cannot anticipate such a structure.

Reference A21: Fallert-Müller, ed., Encyclopedia of Biochemistry, Vol. J-Z, pp. 448-449 (2000) (in German):

This reference was introduced by an opponent to provide a definition of the term "viroid" as the skilled person would read it.

Reference A34: Letter to the International Examining Authority from Gassner & Partner in the prosecution of PCT/DE00/00244 (WO 00/44895), 5 pages (March 28, 2001) (in German):

This reference was cited by an opponent. The letter states: "Double-stranded oligonucleotides having the complementary region of 25 or more successive nucleotides are known from post-published WO 99/32619."

This statement is being filed after a first Office Action on the merits, but before receipt of a final Office Action or a Notice of Allowance. Please apply the \$180 for payment of the late submission fee under 37 C.F.R. § 1.17(p) (and any other necessary charges or credits) to Deposit Account No. 06-1050, referencing Attorney Docket No. 14174-104US5.

Respectfully submitted,

Date: July 14, 2006

Allyson R. Hatton, Ph.D.
Reg. No. 54,154
